Cloud Infrastructure & Compliance

Scion Cloud Service

Why a Private Cloud Solution?

Our Private Cloud hosting solution, gives you all the benefits of the Managed Server but with the freedom to run Scion in our datacenters, as opposed to running it on your own hardware and premises.

As our datacenters have redundant power and networking, they ensure full 24/7 365 access reducing some of the risk (and cost) to your Credit Union.

Private Cloud Services

Hardware Procurement - Procurement & management of hardware within Well-IT Datacentre.

Resources - Servers, failover and network redundancy, all powered within the Datacentre.

VM Licensing - Virtual machine licensing including Windows, Evidian & Veeam for replication is included.

Environment – Including air conditioning, uplinks & cross connects for Data transfer, physical and virtual security.

Security - Firewall policies and rules, physical security at the Datacentre, including maintenance & routing support.

Redundant Power - Redundancy for power, networking & co-located Datacentre locations.

Customer Success

"The switchover was seamless. The Wellington IT PS team were available onsite and remotely and the whole thing was completed from Saturday afternoon to Sunday. This was really important as we didn't want to have to close any branches".

Trevor Montgomery | IT Manager | MFCU

Fact Sheet

Reduce your Support Costs

On premise servers endure power and platform costs and need continuous upgrades to ensure you are always on the latest version.

With a private cloud server, we take care of all of this. Platform replacement and upgrades are also covered, so no surprise expenditure for device upgrades or renewals!

No More Grey Area

With Scion Private cloud hosting there is a clear line of delineation on what we look after and what the Credit Union looks after.

We liaise with both the Credit Union and your 3rd party provider to facilitate connection, service, and maintenance of equipment providing access to the Private Cloud.

This takes away some of the responsibility from you and lessens your reliance on a physical server.

Customer Success

"Choosing the Private Cloud hosting solution for our Credit Union was one of the best decisions we made. With the freedom to run Scion in Wellington IT's secure datacenters, we've experienced unmatched flexibility and reliability. It's like having our own dedicated infrastructure without the hassle of managing hardware and premises. The Managed Server benefits coupled with the control of running Scion in a private cloud environment have truly elevated our operations. Highly recommend it!"
